

CAREER OBJECTIVE

Software Engineering student with JLPT N4 certification and practical experience in Manual and API Testing for Japanese software projects. Strong understanding of SDLC, STLC, and the Ho-Ren-So communication principle. Highly skilled in requirement analysis, test case design, and utilizing SQL/Postman for data verification. A disciplined, detail-oriented individual eager to ensure software quality and deliver daily reports effectively for Japanese clients.

EDUCATION

FPT University

Major in software engineering
2022 - 2026 | GPA 3.46/4

Language Proficiency

- English: Proficient in reading technical documentation and basic communication
- Japanese: JLPT N4

TECHNICAL SKILLS

- Testing & QA: Manual Testing, API Testing (Postman, Swagger), Test Plan & Test Case Design, Test Data Preparation, Functional & Regression Testing.
- Process & Culture: SDLC, STLC, Agile/Scrum, Ho-Ren-So, Daily Reporting, Bug Tracking & Management.
- Databases: PostgreSQL, SQL Server, MySQL; proficient in writing basic and complex SQL queries to check DB data.
- Backend & API: Java (Spring Boot), RESTful API, JSON.
- Tools: JIRA, Backlog, DataGrip, Git, Docker.

CERTIFICATIONS

- Coursera Certificates:
 - [Amazon Junior Software Developer](#) (Amazon - 2025)
 - [User Experience Research and Design](#) (University of Michigan - 2025)
 - [Software Development Lifecycle](#) (University of Minnesota - 2025)

SCHOLARSHIPS & AWARDS

- Japanese Language Scholarship - Riki Nihongo (2024)
- Best in Writing - UOW Malaysia KDU Mobility Program (2023)

WORK EXPERIENCE

QA / Manual Tester Intern | FPT Software Ho Chi Minh City | Sep 2025 - Dec 2025

Project: Japanese Logistics Management System (Web App)

- Requirement Analysis:** Read and analyzed Japanese technical specifications (Spec); coordinated closely with Developers to clarify unclear requirements via Q&A sessions.
- Test Design & Preparation:** Wrote detailed Test Plans, Test Cases, and prepared Test Data for various logistics workflows.
- Testing Execution:** Conducted Manual Testing on the Web App, ensuring all features met the parent company's specifications.
- Bug Reporting & Verification:** Logged detailed bugs with clear reproduction steps on tracking tools; actively tracked and verified bugs after Developers fixed them.
- Communication & DB Checking:** Practiced Ho-Ren-So principles for Daily Reports; utilized Postman for API testing and executed basic SQL queries to verify database data integrity.

PROJECT EXPERIENCE

Laundry Locker | QA Lead & Backend Developer (Solo) | Jan 2026 - Present

GitHub: <https://github.com/BaoHuy-Dev/laundry-locker-backend>

- Brief:** A smart laundry locker platform requiring strict quality control for end-to-end order lifecycles and payment integrations.
- Test Design & Execution:** Created Test Plans and designed detailed Test Cases for a 9-status order management workflow.
- API Testing:** Manually tested VNPay/MoMo API integrations using Postman, ensuring secure and stable transaction flows.
- Data Verification:** Used direct SQL queries to validate revenue calculations, user roles, and partner store data in the PostgreSQL database.
