

Software Design Patterns

Chapter 1: Creational Patterns

Singleton: Ensure a class has only one instance.

Factory: Create objects without specifying exact class.

Builder: Construct complex objects step by step.

Chapter 2: Structural Patterns

Adapter: Allow incompatible interfaces to work together.

Decorator: Add behavior to objects dynamically.

Chapter 3: Behavioral Patterns

Observer: Define one-to-many dependency between objects.

Strategy: Define a family of algorithms.

Command: Encapsulate a request as an object.
